

# Freedom Development Platform for Kinetis® K64, K63, and K24 MCUs

## TSP1

### Preproduction

このページでは、試作品の情報を掲載しています。ここに記載されている仕様や情報は、予告なく変更されることがあります。追加情報については、または営業担当者にお問い合わせください。

Last Updated: Oct 15, 2024

The Freedom-K64F is an ultra-low-cost development platform for Kinetis® K64, K63, and K24 MCUs.

Form-factor compatible with the Arduino® UNO Rev3 pin layout

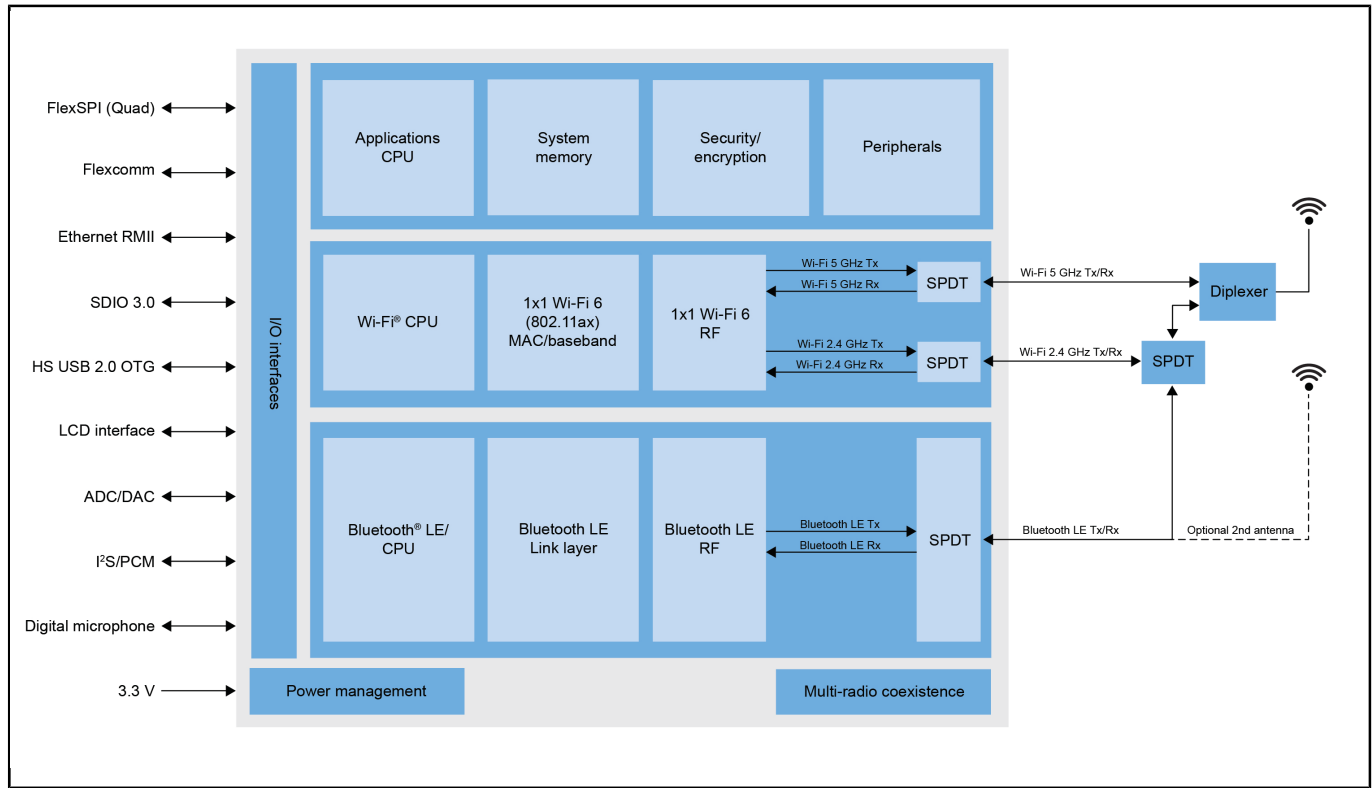

Peripherals enable rapid prototyping, including a 6-axis digital accelerometer and magnetometer to create full eCompass capabilities, a tri-colored LED and 2 user push-buttons for direct interaction, a microSD card slot, and connectivity using onboard Ethernet port and headers for use with Bluetooth® and 2.4 GHz radio add-on modules

OpenSDAv2, the NXP open source hardware embedded serial and debug adapter running an open source bootloader, offers options for serial communication, flash programming, and run-control debugging

The FRDM-K64 is now supported by Arm® Mbed™ OS and Zephyr OS, both open source embedded operating systems for developing the Internet of Things.
