

How to Use Acrobat Full-Text Search

All of the documents on this CD are searchable via the Acrobat 4.0 search and query tool. In order to invoke search and query in Acrobat:

1. Click on **Edit/Search/Query**. At this point you will be presented an *Adobe Acrobat Search* dialogue box.
2. Click on **Indexes**. You will be presented an *Index Selection* dialogue box.
3. Click on **Add**. You will be presented an *Add Index* dialogue box. At this point, use the dialogue box browser to navigate to the following folders. In every case select the *index.pdx* file within the given folder and click **OPEN**. This will enable the index to be searched. Note: you only have to add these indexes once. The next time you insert the CD Acrobat will remember them.
 - *mpc509*
 - *mpc555*
 - *mpc555*
 - *mc68332*
 - *mc68336/376*
 - *mc68f375*
 - *mc68f377*
 - *rcpu*
 - *appnotes*
 - *tpudoc/tpupn*
4. The other documents on the CD such as the *SIU Reference Manual* and the *TPU Reference Manual* are in a single PDF file and can be searched with the Acrobat **Edit/Find** tool.
5. Once the indexes have been opened you may select the index you want to search by making sure that the appropriate index has a check mark beside it, then click **OK**.
6. Enter your character string and begin the search.
7. When your *Search Results* are presented, click **View** to go to the desired reference. Note: in order to get the *Search Results* box to re-appear, hold down **CTRL + SHIFT** and hit **G**.

Note: only the first instance of the search string will be displayed within a document. In order to search for further instances, use the **Edit/Find** function in Acrobat. **Find Again** is evoked by **CTRL + G**.

If you have any problems using the Acrobat search and query tool, there is an excellent on-line help function accessed by clicking on **Help**.
