# 1 Overview

The GainSpan Wi-Fi Tower Module (TWR-WIFI-G1011MI) is a low-cost evaluation, demonstration and development board that features an 802.11b solution from GainSpan. The following list summarizes the features of the TWR-WIFI-G1011MI:

- GainSpan GS1011MIP Wi-Fi module
  - Compliant to 802.11b and operates with standard 802.11 b/g/n access points at speeds up to 11 Mbps
    - Supports Infrastructure or Adhoc mode
  - UART and SPI interfaces
    - Up to 3 MHz in SPI Slave Mode
    - Up to 921.6 kbps baud rate on UART
  - Full Wi-Fi stack including WPS and optional networking stack and services
  - 802.11i Security
    - WEP, WPA, WPA2-PSK, Enterprise
  - Embedded Web Server for Provisioning
  - Certified RF Module: FCC/IC, ETSI, RoHS, Compliant with JAPAN regulatory

A block diagram for the TWR-WIFI-G1011MI is shown in the figure below.

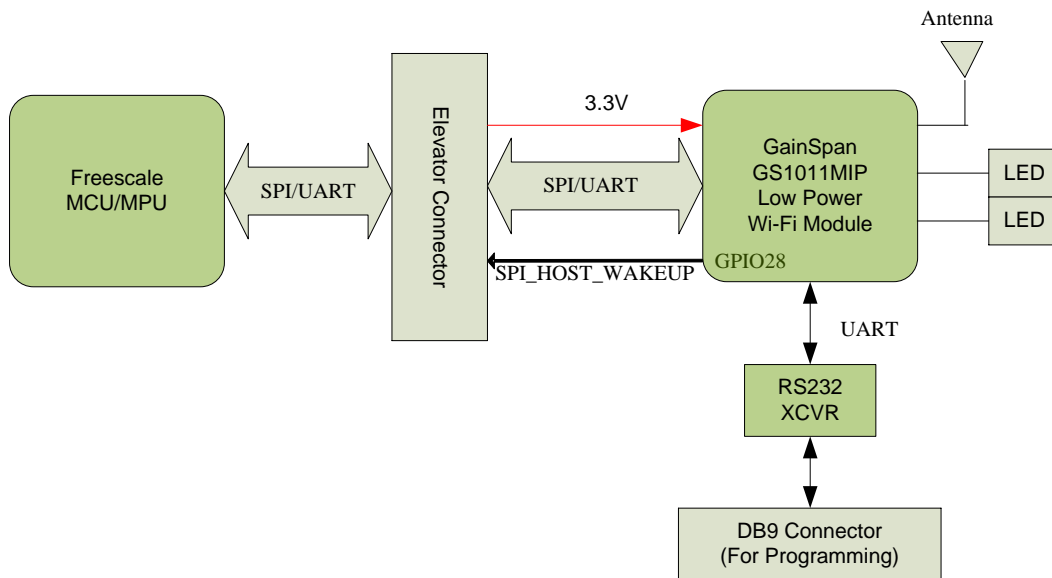

Figure 1. TWR-WIFI-G1011MI Block Diagram

## 3 Hardware Features

---

This section provides more details about the features and functionality of the TWR-WIFI-G1011MI.

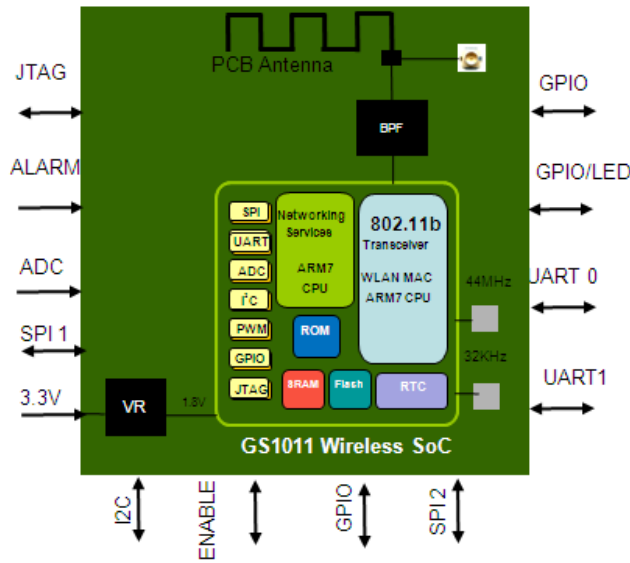

### 3.1 GS1011MIP Module

GS1011MIP module is a highly integrated ultra low power Wi-Fi module that contains the following:

- GainSpan's GS1011 Wireless SoC, which contains media access controller (MAC), baseband processor, on-chip flash memory and SRAM, and a network processor in a single package.
- Built in certified PCB trace antenna or external Antenna Options and onboard 32 KHz & 44 MHz crystal circuitries.
  - The GS1011MIP has a capability of +8 dBm (typical) output power at the antenna
- Module includes a variety of I/O interfaces:
  - Two UART with optional hardware flow control support
  - Two SPI block with Master or Slave Operation
  - I<sup>2</sup>C with Master or slave operation
  - Two low-power 10-bit ADC capable of running at up to 32 Ksamples/Sec.
  - GPIO's, and LED Drivers/GPIO with 20mA capabilities, JTAG

The Module carries onboard single supply monitor for under voltage supply and onboard 1.8V regulator with enable/disable capabilities for power critical applications. For additional details refer to the GS1011M data sheet available from GainSpan. Below is a high level block diagram of the GS1011MIP module. Other pin-compatible variations of the module are also available. Please refer to the GainSpan GS1011M Module datasheet.

### GS1011M Block Diagram

The TWR-WIFI-G1011MI module connects to the Freescale Tower platform using the SPI or UART interface and uses the TCP/IP stack of the Freescale MQX system. The module firmware supports basic AT command set and the MQX driver for the GS1011MIP communicate using these AT command sets. By default the SPI interface is used.

### 3.2 System Power

The TWR-WiFi-G1011MI is powered by 3.3V from the Primary Elevator connector.

### 3.3 Special I/O, access headers, etc.

The firmware on the GainSpan GS1011MIP runs directly from the on-board flash on the GS1011 SoC. To allow for updating of the program on the flash, the TWR-WIFI-G1011MI incorporates a UART serial interface for programming purposes. This interface is brought out to a standard RS232 DB9 connector via a RS232 transceiver. There are 3 buttons on the board which are currently reserved for future use. The TWR-WiFi-G1011MI also has LED's connected to the module. These LED's are connected to GPIO pins of the module and can be toggled using the serial AT commands to indicate activity. Table below indicates the connection and functionality of the LEDs.

	ELEVATOR Connection	GS1011MIP Connection	Description
D1	+3.3V	VIN_3V3	Indicates Active Power to Module
D2		GPIO30_LED1	LED indication via GPIO30 of GS1011MIP
D3		GPIO31_LED2	LED indication via GPIO31 of GS1011MIP
D4	+3.3V		Indicates Active Power on Tower System

For further details refer to the TWR-WIFI-G1011MI schematics.

### 3.4 Elevator Connections

The TWR-WIFI-G1011MI features two expansion card-edge connectors that interface to Elevator boards in a Tower system: the Primary and Secondary Elevator connectors. The Primary Elevator connector, comprised of sides A and B, is utilized by the TWR-WIFI-G1011MI, while the Secondary Elevator connector only makes connections to ground (GND). Table 1 provides the pinout for the Primary Elevator Connector. An “X” in the “Used” column indicates that there is a connection from the TWR-WIFI-G1011MI to that pin on the Elevator connector. An “X” in the “Jmp” column indicates that a jumper is available that can configure or isolate the connection from the Elevator connector.

Table 1. TWR-WIFI-G1011MI Primary Elevator Connector Pin-out

TWR-WIFI-G1011MI Primary Connector									
Side B					Side A				
Pin #	Name	Usage	Used	Jmp	Pin #	Name	Usage	Used	Jmp
B1	5V				A1	5V			
B2	GND	Ground	X		A2	GND	Ground	X

## 4 Jumper Table

There are several jumpers provided for isolation, configuration, and feature selection. Refer to the following table for details. The default installed jumper settings are shown in **bold**.

Table 2. TWR-WIFI-G1011MI Jumper Table

Jumper	Option	Setting	Description
SW1	Power Supply Input	<b>TOWER</b>	Power from Tower System 3.3V
		DC POWER JACK	Power from DC power jack (J2)
SW2	Mode Selection	<b>RUN</b>	GS1011MI in standard "run" mode
		PROGRAM	GS1011MI in program mode
J3	UART Routing Selection	1-2	Connect GS1011MI UART0 to on-board RS232/DB9
		<b>2-3</b>	Connect GS1011MI UART0 to Tower System
J6	Serial Interface Selection	<b>1-2</b>	Enable SPI interface from Tower to GS1011MI
		2-3	Enable UART interface from Tower to GS1011MI
J7	Master SPI Port CS Selection	1-2	Connect Tower SPI1_CS1 to master SPI CS on GS1011MI
		3-4	Connect Tower SPI1_CS0 to master SPI CS on GS1011MI
J9	Slave SPI Port CS Selection	<b>1-2</b>	Connect Tower SPI0_CS0 to slave SPI CS on GS1011MI
		3-4	Connect Tower SPI0_CS1 to slave SPI CS on GS1011MI
J10	Interrupt Selection	1-2	Connect GS1011MI interrupt to Tower IRQ_G (B56)
		3-4	Connect GS1011MI interrupt to Tower IRQ_E (B58)
		5-6	Connect GS1011MI interrupt to Tower IRQ_C (B60)
		<b>7-8</b>	Connect GS1011MI interrupt to Tower IRQ_A (B62)
J11	GS1011MI Reset Selection	1-2	Connect GS1011MI Reset to Tower GPIO9 (A9)
		2-3	No connection
J12	GS1011MI Reset Selection	<b>1-2</b>	Connect GS1011MI Reset to Tower RSTOUT (A63)
		2-3	Connect GS1011MI Reset to Tower GPIO1 (B21)
